Rinil Parmar

Windsor, ON | 519-566-7353 | parmar7f@uwindsor.ca | github.com/Rinil-Parmar | linkedin.com/in/parmar-rinil

Professional Summary

Software Engineer with 1.5+ years of professional experience building AI agent platforms, real-time backend systems, and LLM-powered pipelines using Go, Python, and Java. Proven track record designing human-in-the-loop AI workflows, RAG systems, and production microservices with WebSockets, Docker, Kubernetes, and strong habits around testing, code review, and observability.

Technical Skills

AI Agents & LLMs: AI Agents, LLM Pipelines, Human-in-the-Loop Workflows, RAG, Vector Databases, Embeddings, Prompt Engineering, OpenAI API, Evals, PyTorch, Scikit-Learn

Languages: Go, Python, Java, JavaScript, TypeScript, SQL, Rust, C/C++, Object-Oriented Programming (OOP)

Backend & Real-Time: RESTful APIs, Microservices, WebSockets, Apache Kafka, Spring Boot, Node.js, Express.js, Flask, React, Redux Toolkit

Cloud & Infrastructure: AWS (S3, EC2, IAM, Lambda), Docker, Docker Compose, Kubernetes, CI/CD (GitHub Actions, Jenkins), Git, Linux, Bash, Agile/Scrum

Data & Quality: PostgreSQL, MySQL, SQLite, DuckDB, Query Optimization, Unit Testing (JUnit, Pytest), Code Review, Structured Logging, Observability, Security

Education

University of Windsor — Windsor, ON

Master of Applied Computing — Sep 2025 – Dec 2026 (Expected)

- Relevant Coursework: Applied Artificial Intelligence, Neural Networks and Deep Learning, Advanced Database Systems, Advanced System Programming (Linux), Advanced Computing Concepts

Dharmsinh Desai University — India

Bachelor of Technology – Computer Engineering — Aug 2020 – May 2024

Professional Experience

Assistant System Engineer — Jan 2025 – Jul 2025

Tata Consultancy Services — India

- Designed and deployed 2+ production Java Spring Boot microservices processing 100K+ records, building event-driven real-time pipelines with Apache Kafka to support data flows across distributed backend infrastructure.
- Optimized 15+ RESTful API endpoints with PostgreSQL and MySQL query tuning, improving latency and throughput for high-volume production systems through systematic debugging and performance profiling.
- Built containerized deployment workflows using Docker and Kubernetes, strengthening CI/CD pipelines through Jenkins and GitHub Actions to reduce deployment cycles by 40% with strong testing and code review practices.
- Automated iterative feature rollouts across 15+ production releases using Agile/Scrum practices, applying AI coding tools daily to accelerate engineering velocity while maintaining quality and security standards.

Software Developer – Remote — May 2024 – Dec 2024

Onelyk Pvt Ltd — United States

- Architected a Node.js/Express.js backend on AWS supporting 100+ hotel partners and 500k+ guest interactions, building real-time WebSocket streaming pipelines and Twilio SMS integration achieving a 95% response rate.
- Developed 10+ analytics dashboards using React and TypeScript, translating product requirements into production-ready features with strong product instincts and user-focused design.
- Integrated real-time messaging and notification systems using WebSockets and Twilio, building observability and monitoring for low-latency communication workflows at scale.
- Delivered end-to-end features with Redux Toolkit and Tailwind CSS, using Claude Code, Codex, and GitHub Copilot daily to multiply engineering output without compromising code quality.

Software Engineer Intern — Jan 2024 – Apr 2024

Promact Infotech — India

- Established a full-stack application using React and ASP.NET (C#) with PostgreSQL, consolidating 10K+ customer records into a centralized system with secure OAuth2 RBAC via Auth0 and Microsoft Identity.

- Implemented efficient backend API logic and data access layers, writing tests and documentation to ensure code quality and security across the application.
- Automated manual data processing workflows using Python scripts, reducing manual effort by 60% and improving system reliability.

Projects

Aros – Multi-Agent AI Platform | *Go, Claude Code, OpenCode, LLMs, Go Routines, errgroup, Cobra, TOML* Jun 2026

- Designed and built a multi-agent AI platform in Go using Plan→Divide→Work phases with human-in-the-loop approval gates, enabling dependency-aware task execution and real-time coordination across multiple LLM-powered AI agents.
- Implemented concurrent agent execution using Go routines and errgroup, with per-agent audit logging capturing decisions, tool calls, latency, and completion status for deep observability and evaluation.
- Built MCP-compatible tool orchestration with TOML-based configuration, supporting persistent memory and structured agent coordination with security-conscious design patterns.

Secondmem – AI-Powered Knowledge Management CLI | *Go, SQLite, RAG, Embeddings, OpenAI API, Ollama, FTS5*May 2026

- Architected a full RAG pipeline in Go with cosine similarity retrieval over a SQLite vector database, implementing SHA-256 deduplication and 70% semantic similarity thresholds for intelligent content retrieval.
- Developed FTS5 keyword graph fallback and a 7-step rebalance pipeline, integrating multiple LLM providers including OpenAI and Ollama with citation lineage tracking and evaluation metrics.
- Built an end-to-end AI-powered system enabling structured data ingestion, embedding generation, and retrieval entirely on-device with security and data integrity guarantees.

FinLedger – Financial Book of Record | *Java, Spring Boot, PostgreSQL, Apache Kafka, Docker, GitHub Actions* Sep 2026

- Built a production-grade Java Spring Boot backend with PostgreSQL, implementing append-only ledger writes, a single write funnel, and separate read/write paths to ensure data integrity under concurrent real-time operations.
- Implemented a Kafka event pipeline with idempotency enforcement, structured logging for observability, and automated CI/CD via GitHub Actions for reliable containerized deployment.
- Designed comprehensive data validation and error handling with thorough JUnit test coverage, enforcing referential integrity and security across every transaction.

Distributed File Retrieval System | *C/C++, Linux, TCP/IP Sockets, Multi-Processing, Bash* Apr 2026

- Designed a multi-process client-server system in C using TCP/IP sockets and Linux fork-based concurrency, distributing queries across 3 servers with round-robin load balancing for low-latency parallel execution.
- Implemented multi-criteria filtering with server-side tar.gz packaging for efficient data transfer, building Bash test scripts to verify reliability under concurrent query loads.
- Built client-side command validation and systematic debugging workflows, demonstrating strong fundamentals in real-time distributed systems and infrastructure engineering.

Certifications

- **AWS Cloud Quest: Generative AI Practitioner** – AWS Training Badge *(Credly Verified)*.
- **AWS Academy Graduate – Generative AI Foundations** – AWS Training Badge *(Credly Verified)*.
- **AWS Academy Graduate – Cloud Foundations** – AWS Training Badge *(Credly Verified)*.

Achievements

- **GATE Qualified** – GATE CS-IT 2023 (national-level graduate aptitude test in Computer Science).
- Solved **700+ problems** across **LeetCode** (180+), **CodeChef**, and **HackerRank**.
